MY OBJECTIVES

If I had to describe myself with three words, those would be **quick**, **efficient** and **flexible**. I am able to see the bright side of problems. In my opinion there is no unsolvable task or a question that can't be asked. My strenght in problem solving comes from this mentality.

I am looking for a work enviroment where you can benefit from these talents.

I enjoy working with complex problems as I see these as challenges. I also enjoy logical tasks, or process optimalization problems. I am able to learn the neccesary processes and software usages quickly.

I am looking for a long term contract and I am willingly taking part in trainings if neccesary. I would like to be in a workplace that supports me with relevant work experience and where I can be part of a professional team.

If I caught your attention, please reach out to me on one of the above mentioned contact.
